Successful execution of our solution will make even other industry to implement this solution

suitable sensors in the beacons. We will connect our wearable to the beacons. We will send updates to online cloud from the beacon. From the cloud we will be accessing the reading and using that we will have a web page and a mobile

application to display them. We will have

sms service to alert abnormal readings

We are going to monitor the area using

8.1 ONLINE

All the informations will be stored in cloud. so the employees can see the cloud storage or mobile application for referring the details of surroundings.

## 8.2 OFFLINE

Employees used to wear a watch which captures the information of the surroundings.

4. EMOTIONS: BEFORE / AFTER EM
It will be easy for employees to identify or to know about their environment
to know about their environment
